Information about the Quest product - what Cialis? Action of Cialis how to use Cialis benefits of Cialis what is the cause of the disorders of selection? Quest - what Cialis?

Cialis is a medication for the treatment of disorders of selection. We talk about erection unrest when the penis does not come into erection or does not rest long enough in erection for satisfactory sexual intercourse. A Cialis comprimide is 30 minutes after its ingestion and works for 36 hours.

Cialis action

The active ingredient of Cialis is Tadalafil. It is an inhibitor of the phosphodiesterase of type 5 (PDE5). It inhibits the action of the enzyme phosphodiesterase in the body. This enzyme breaks down substances that give rise to an erection. Cialis inhibits the functioning of this enzyme, the erectile substances, therefore, remain active. It is then easier to get an erection and keep it. On the other hand, Cialis dilates some blood vessels, thus facilitating the inflow of blood to the penis. This medication works when there is sexual stimulation. Without stimuli, erectile substances are not produced. Here you find explanations concerning the mechanisms of selection disorders treatments.

How to use Cialis

Cialis is made in dosing of 10 mg or 20 mg. 2.5 mg and 5 mg tabs bear the name of Cialis Once a Day. Strictly follow the requirements of the process when use of this medication. Take Cialis 10 mg and 20 mg at least 30 minutes before sexual intercourse. The medication is effective for 36 hours after ingesting. These 36 hours you can have intercourse without problems.
